Eddie Camacho

Linux System Administrator | **Active Secret Security Clearance**

Aomori, Japan | eddie.camacho@gmail.com | github.com/Worldtraveler247 | LinkedIn

Professional Summary

Linux System Administrator (remote) with an active DoD Secret clearance — RHCSA and CompTIA Security+ certified. I administer RHEL systems day-to-day and I'm completing RHCE training focused on Ansible automation. Before tech: 10+ years in cleared security operations in Japan and a B.S. in Cybersecurity Management and Policy. I build Linux and security projects in public. Targeting cleared Linux sysadmin, cloud support, and junior cloud security roles, remote or Japan-based.

Professional Experience

Linux System Administrator — Pro-Core Plus, Remote *September 2025 – Present*

- Remote Linux system administration on RHEL-based systems: user and permission management, package management and patching, service and storage administration, log analysis and troubleshooting, and system hardening. Day-to-day work with Bash and Ansible-driven configuration in secure, cleared environments
- Provisioned and configured Red Hat Enterprise Linux 9 servers across a VMware vSphere/ESXi environment using ISO installs, automated Kickstart, template-driven clones, and static networking via NetworkManager (nmcli)
- Managed centralized identity and access with FreeIPA, Kerberos, and SSSD — enrolling hosts and administering users, groups, and host-based access controls across the estate
- Hardened systems with SELinux and firewalld — non-standard service ports, rich-rule restrictions, and SSH limited to a bastion host with key-based authentication and root-login lockdown
- Built persistent storage with LVM, ext4, and NFS — applying correct ownership, root_squash, and POSIX ACLs, mounted reliably through fstab
- Centralized logging by routing host events through rsyslog into a Graylog SIEM for search and correlation

Armed Security Officer (EMT-Certified) — Chenega Security International, Aomori, Japan *July 2014 – Present*

- Supported 24/7 security operations across two sister U.S. Army installations in Japan, conducting 500+ security patrols and inspections annually to maintain site safety, physical security posture, and regulatory compliance
- Responded to 150+ emergency and high-risk incidents, delivering rapid emergency medical intervention as a certified EMT and applying de-escalation techniques, contributing to zero preventable injuries or losses during assigned shifts
- Enforced access control procedures for 200+ personnel and visitors daily, authenticating identities against authorization records, enforcing least-privilege entry, and denying unauthorized access
- Maintained continuous surveillance across a 50+ camera network and physical observation posts, identifying and escalating 10+ security anomalies per month for investigation and incident prevention
- Authored 1,000+ daily activity logs and incident reports with 100% accuracy, sustaining auditable records that supported investigations, after-action reviews, and compliance audits
- Coordinated emergency response with base security forces, fire, and medical services during 25+ joint incident responses, maintaining clear communication and unified command under pressure
- Trained and mentored 10+ new security personnel on post procedures, access control protocols, and emergency response standards

Security Biometric Officer — Vectrus (Government Contract), Camp Pratt, Afghanistan *May 2012 – Jun 2014*

- Oversaw administrative and technical functions for the Biometric Automated Toolset System (BATS) to secure military installations
- Collected and processed sensitive biometric data (eye scans, fingerprints, and photographs) to ensure accurate identity verification for facility access

- Maintained data integrity and confidentiality by enforcing strict management protocols in compliance with privacy laws and high-level security standards
- Troubleshot biometric devices and advanced software to ensure 100% operational readiness for mission-critical identification processes

Technical Projects & Labs

Active App Hub and GitHub portfolio documenting hands-on work in Linux systems administration and security engineering: worldtraveler247.github.io/code_projects

- **Infrastructure as Code** — building secure, scalable AWS environments using Terraform
- **Containerized Security** — deploying cybersecurity tools via Podman on Red Hat Enterprise Linux
- **Ansible Automation** — automating system configuration and preparing for the RHCE certification

Education & Certifications

- **Red Hat Certified Engineer (RHCE)** — Red Hat *In Progress*
- **Red Hat Certified System Administrator (RHCSA)** — Red Hat *Issued Apr 2026 · Expires Apr 2029*
- **CompTIA Security+ ce** — CompTIA *Issued Jun 2025 · Expires Jun 2028*
- **Linux for Jobs** — Yellowtail Tech *Completed Apr 2026*
- **B.S. Cybersecurity Management and Policy** — University of Maryland Global Campus *April 2023*

Technical Skills

Competencies: Operating Systems · Virtualization · Networking · Identity & Access Management · Web Services · Security Hardening · Storage Management · Containers · Ticketing Systems · Scripting · Vulnerability Assessment · Logging & Monitoring · Version Control · Configuration Management · Automation · Infrastructure as Code · Package Management · Data Integrity · Performance Tuning

Tech Stack: Linux (Red Hat/CentOS 7/8/9) · NetworkManager (nmcli), firewalld, Bastion/ProxyJump, FortiClient VPN · FreeIPA, OpenLDAP, Kerberos, SSSD, PAM · Apache (httpd) · TLS, SELinux · LVM, ext4, fstab · Podman · Graylog, rsyslog · Nagios, CheckMK · Git, GitLab · Ansible (ad hoc + playbooks) · VMware vSphere/VirtualBox · systemd · MariaDB, MySQL

Languages: English · Japanese (proficient) \quad Clearance: Active Secret
